

# Mike Rees' 1937 Ford Stake Bed Pickup Project

January 2021

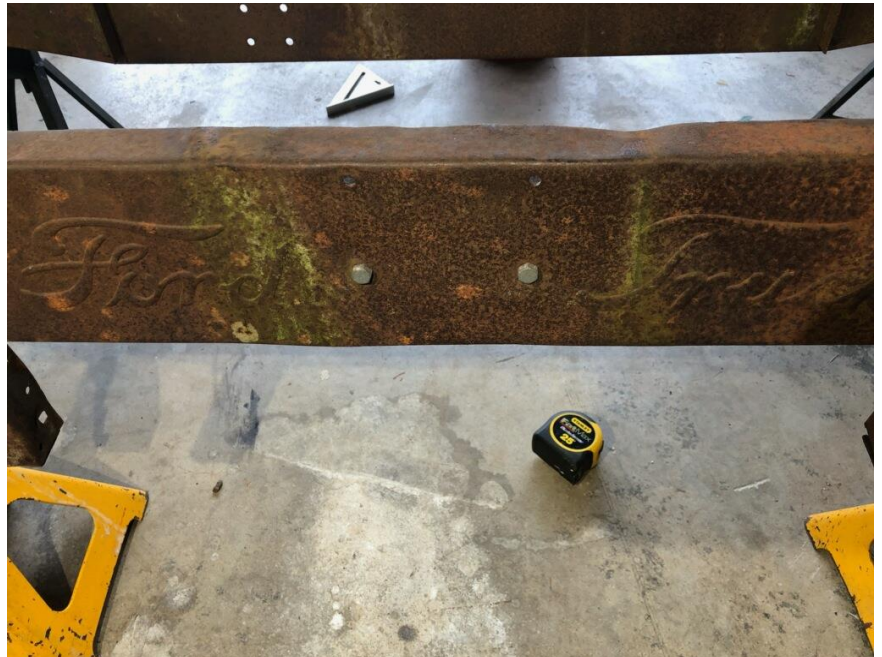

This is the stake bed frame as we got it. Too long. 99 inches. My goal is to match the length of Cliff's stake bed frame. That is, 84 inches.

Here is the first section I cut out. Going from four stake pockets to three. I used a hack saw and took my time. I am too inaccurate with a cutting disc.

This is the new length. 84 inches exactly on both sides. Now I need to do some work to ensure proper alignment before welding.

It's difficult to see but if you zoom in you can see the Ford Truck embossed in this cross member. My favorite feature by far.
